

Building and visualizing hydrological models in 3di

Jonas van
Schrojenstein

Nelen & Schuurmans

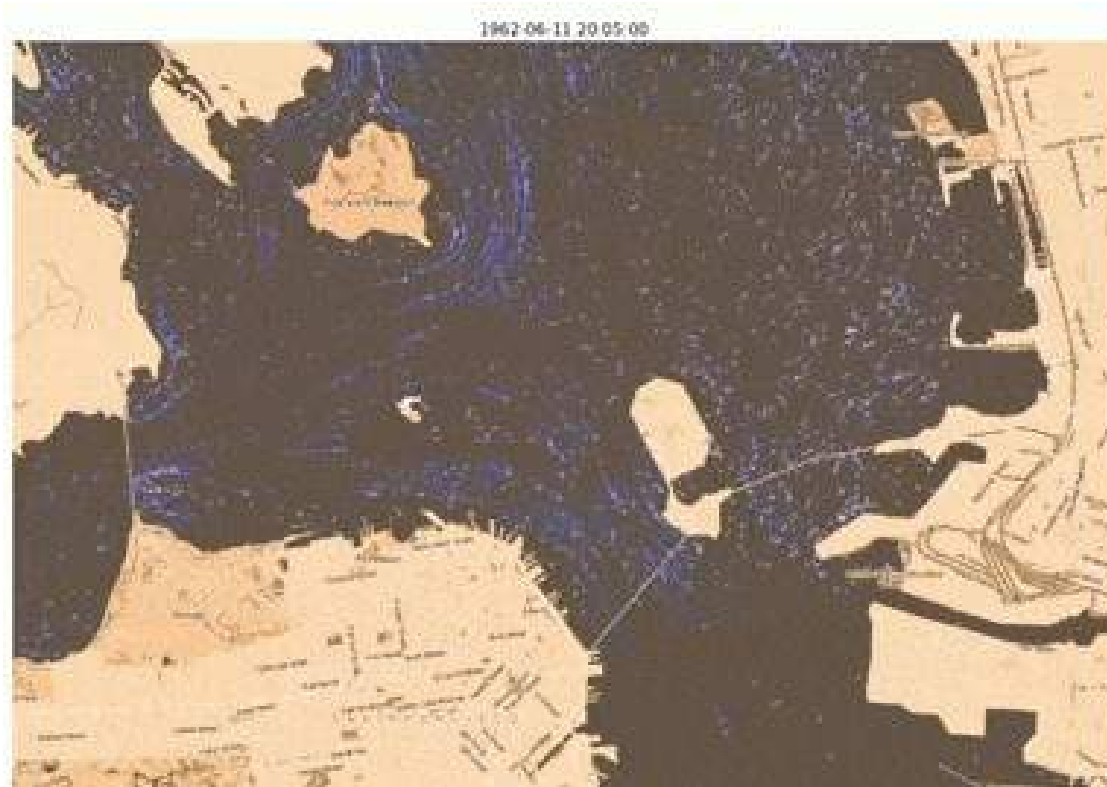

29-10-2015

Escape from Alcatraz

What is 3di?

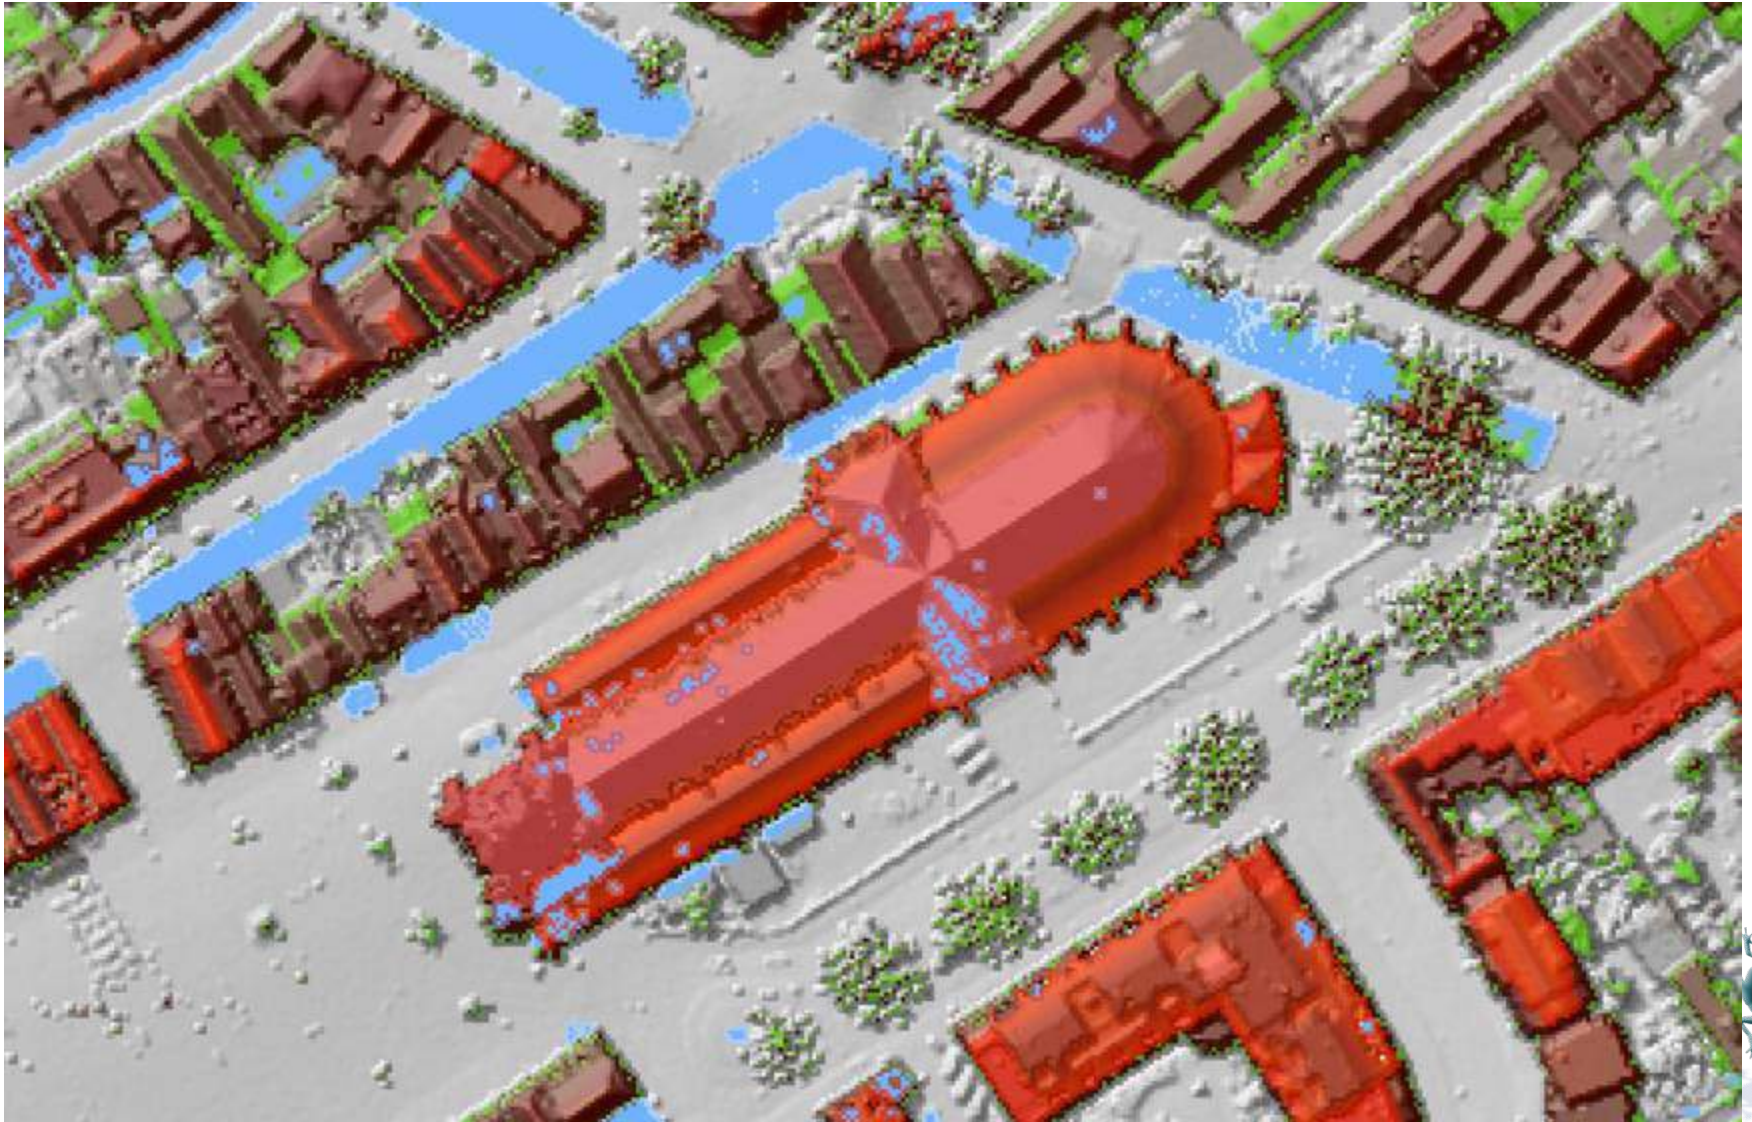

Once upon a time....

- New computational core
 - Fast
 - Accurate
 - Interactive
- Communication tool
 - Information portal
 - 3D visualisation

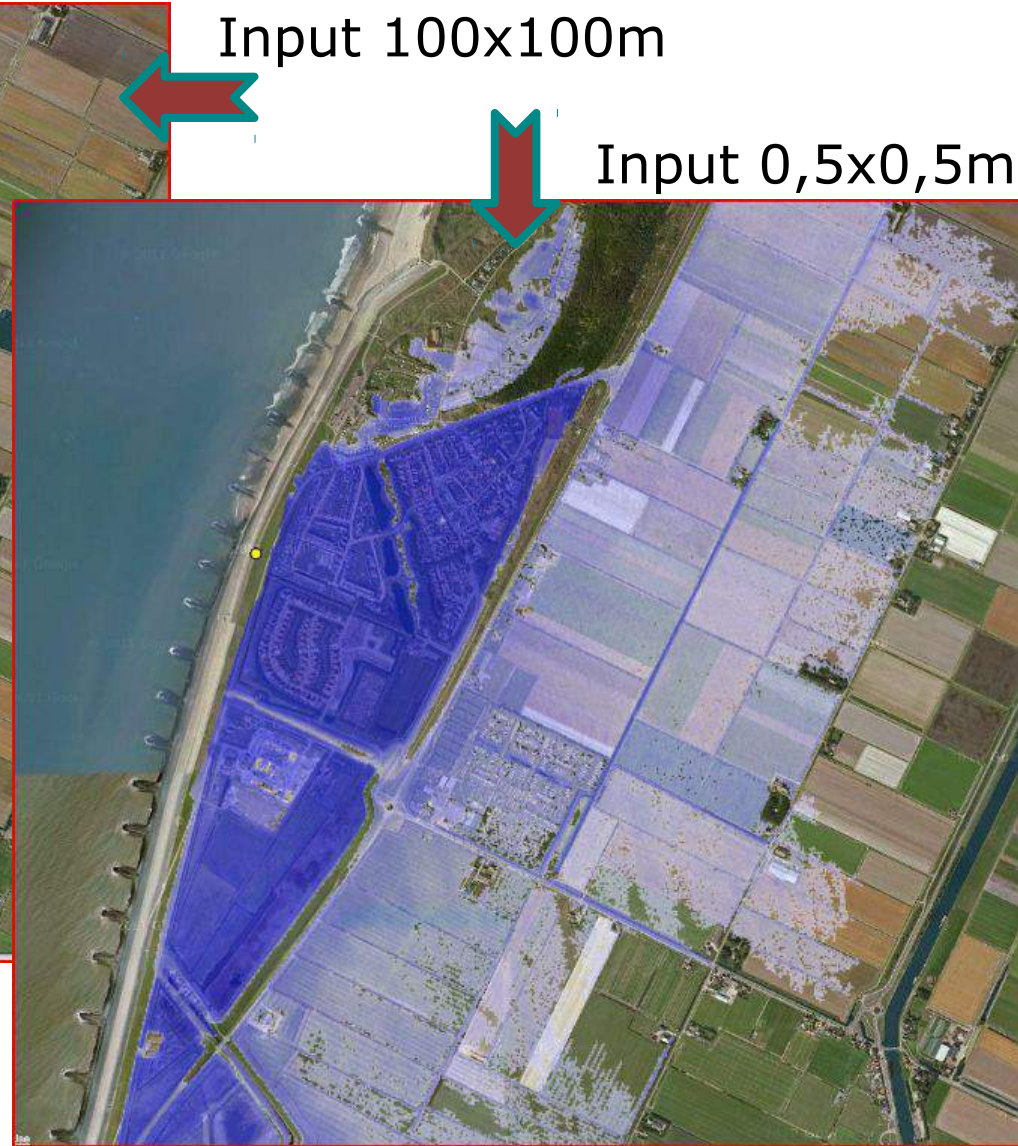

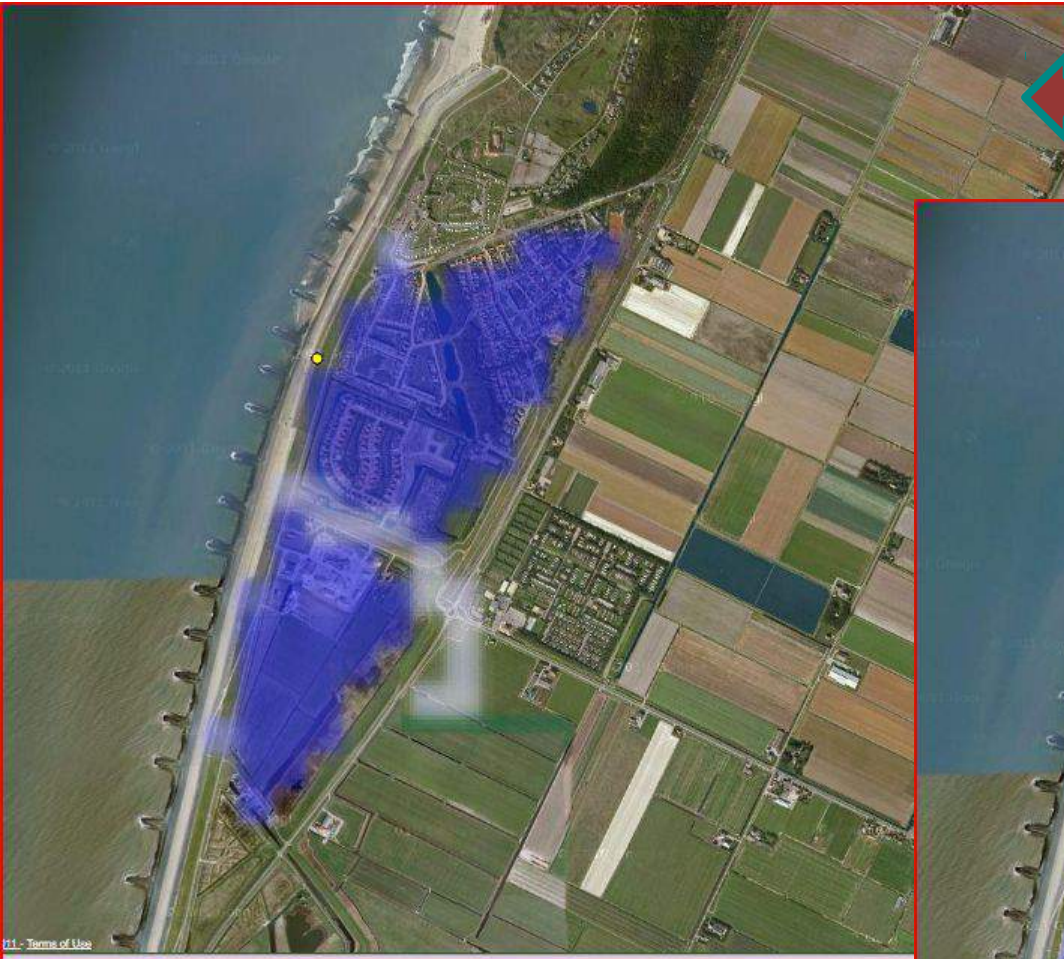

Height model of the Netherlands

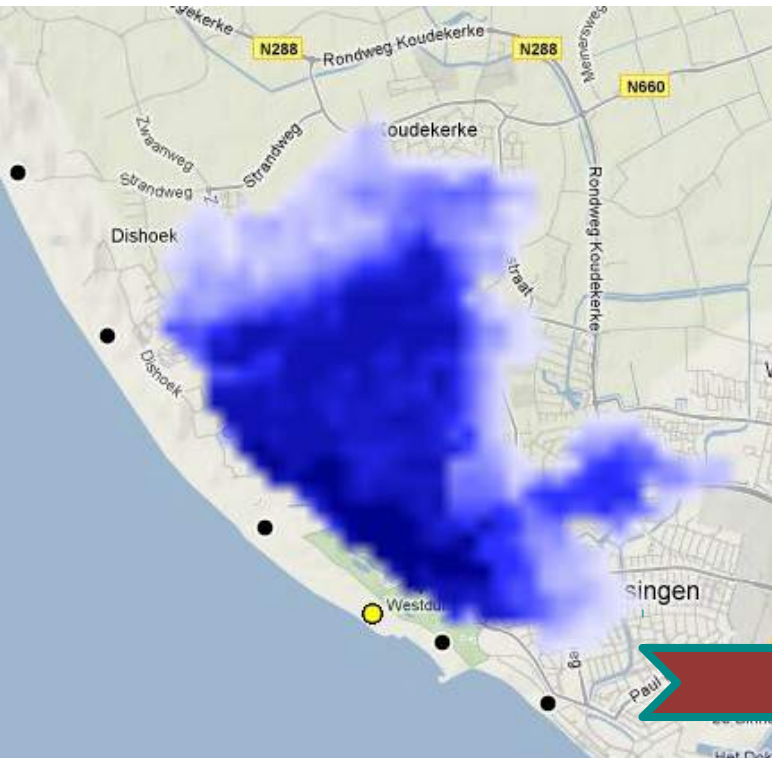

More accurate

More visual

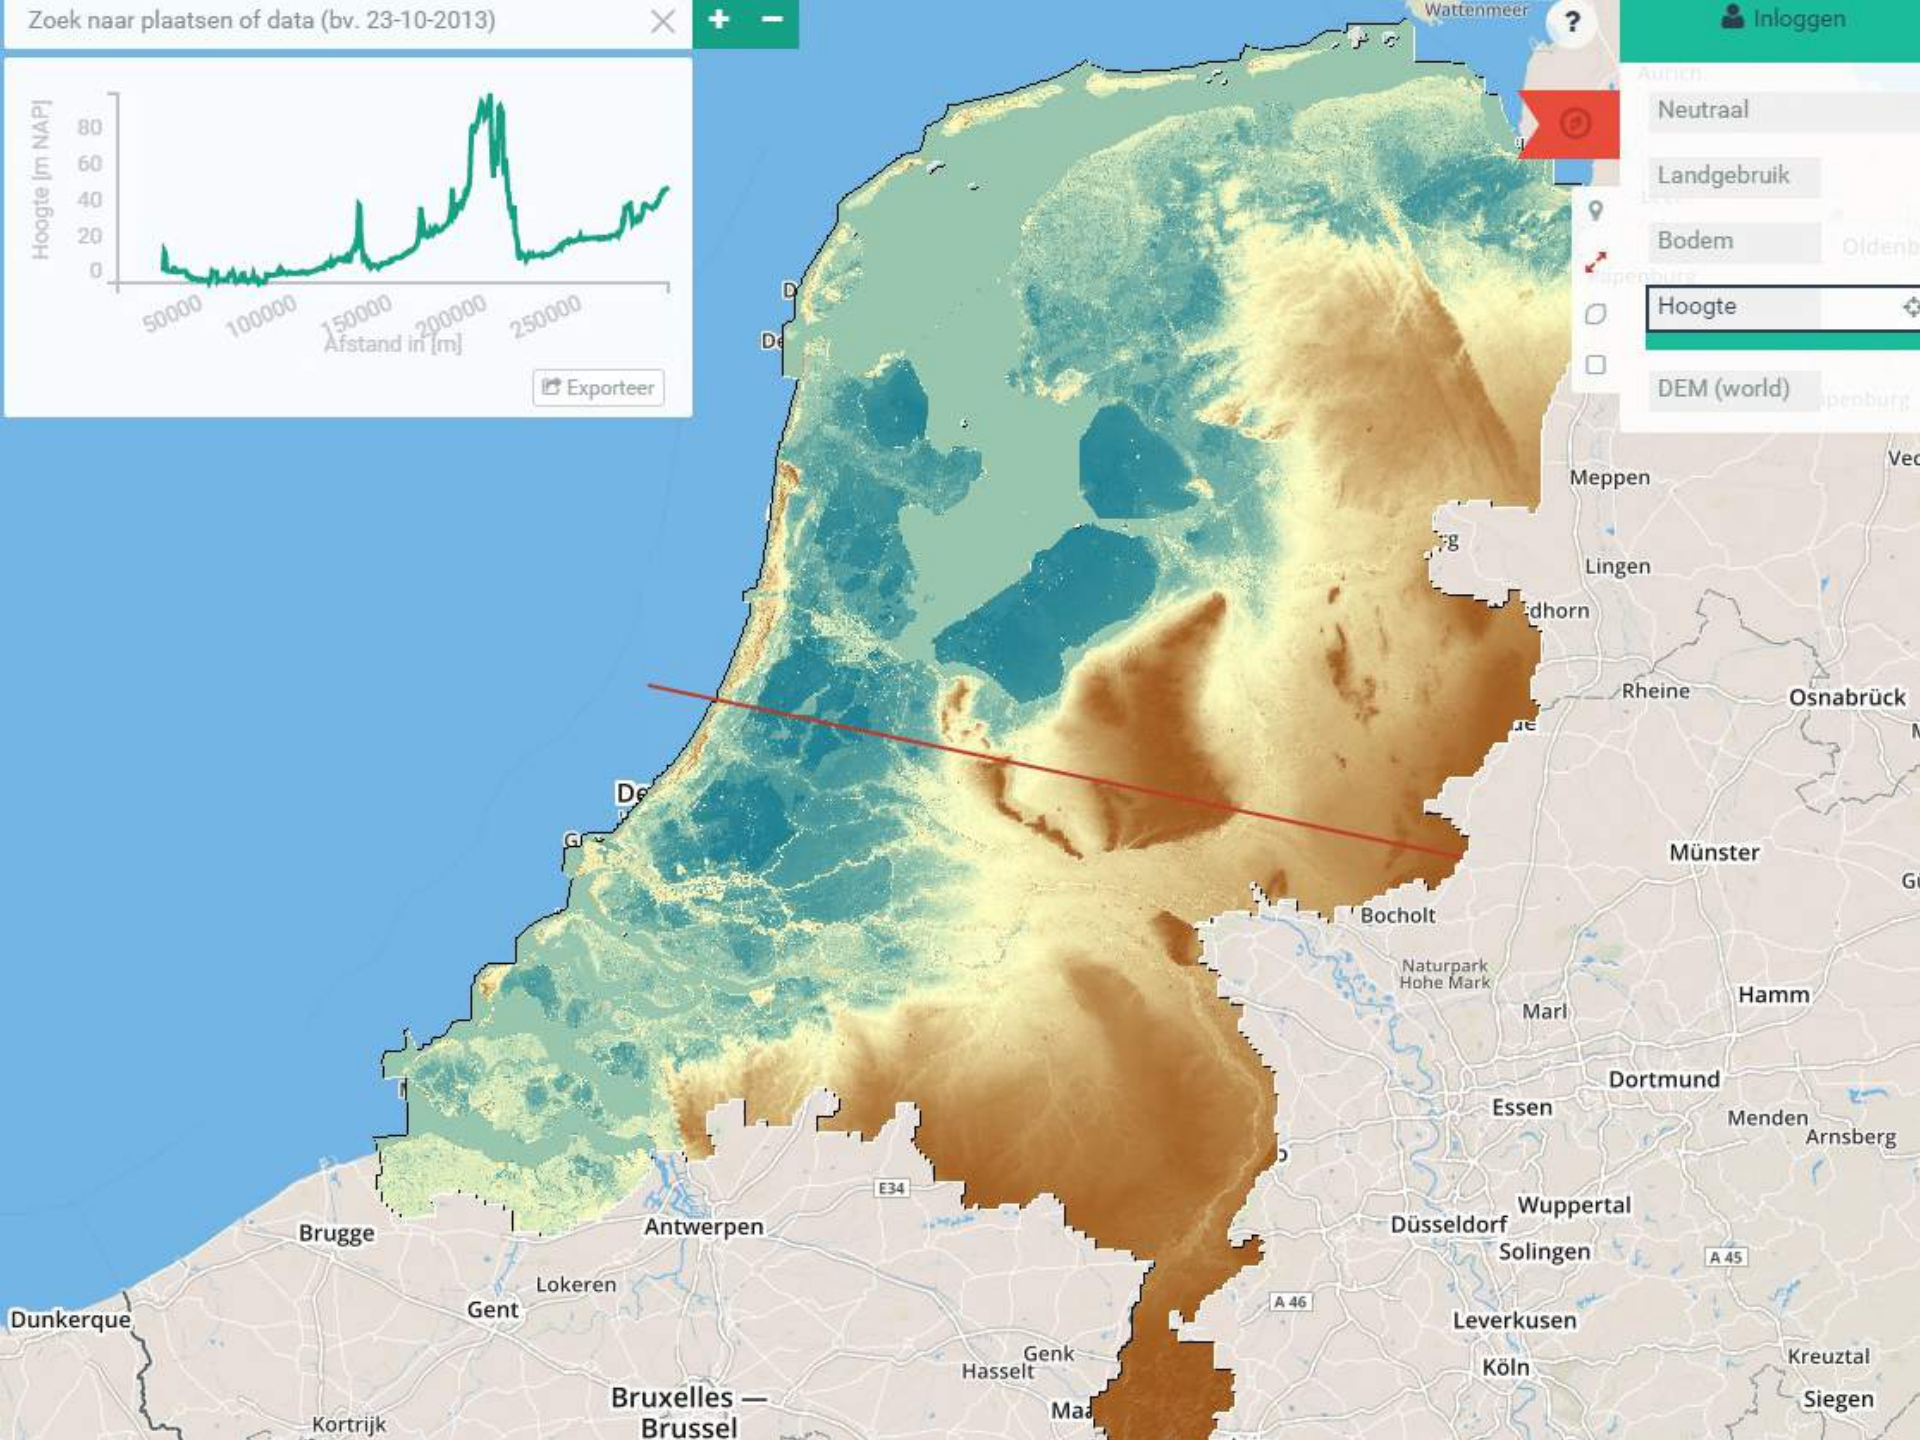

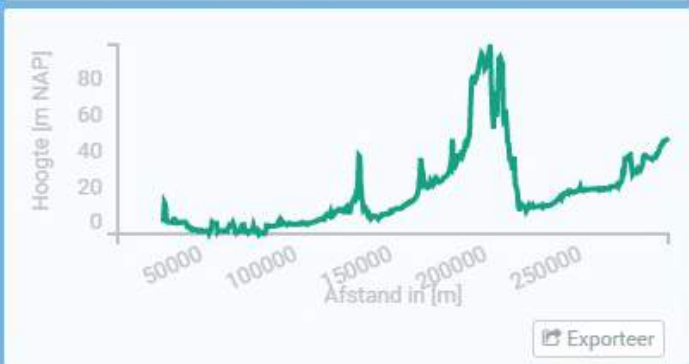

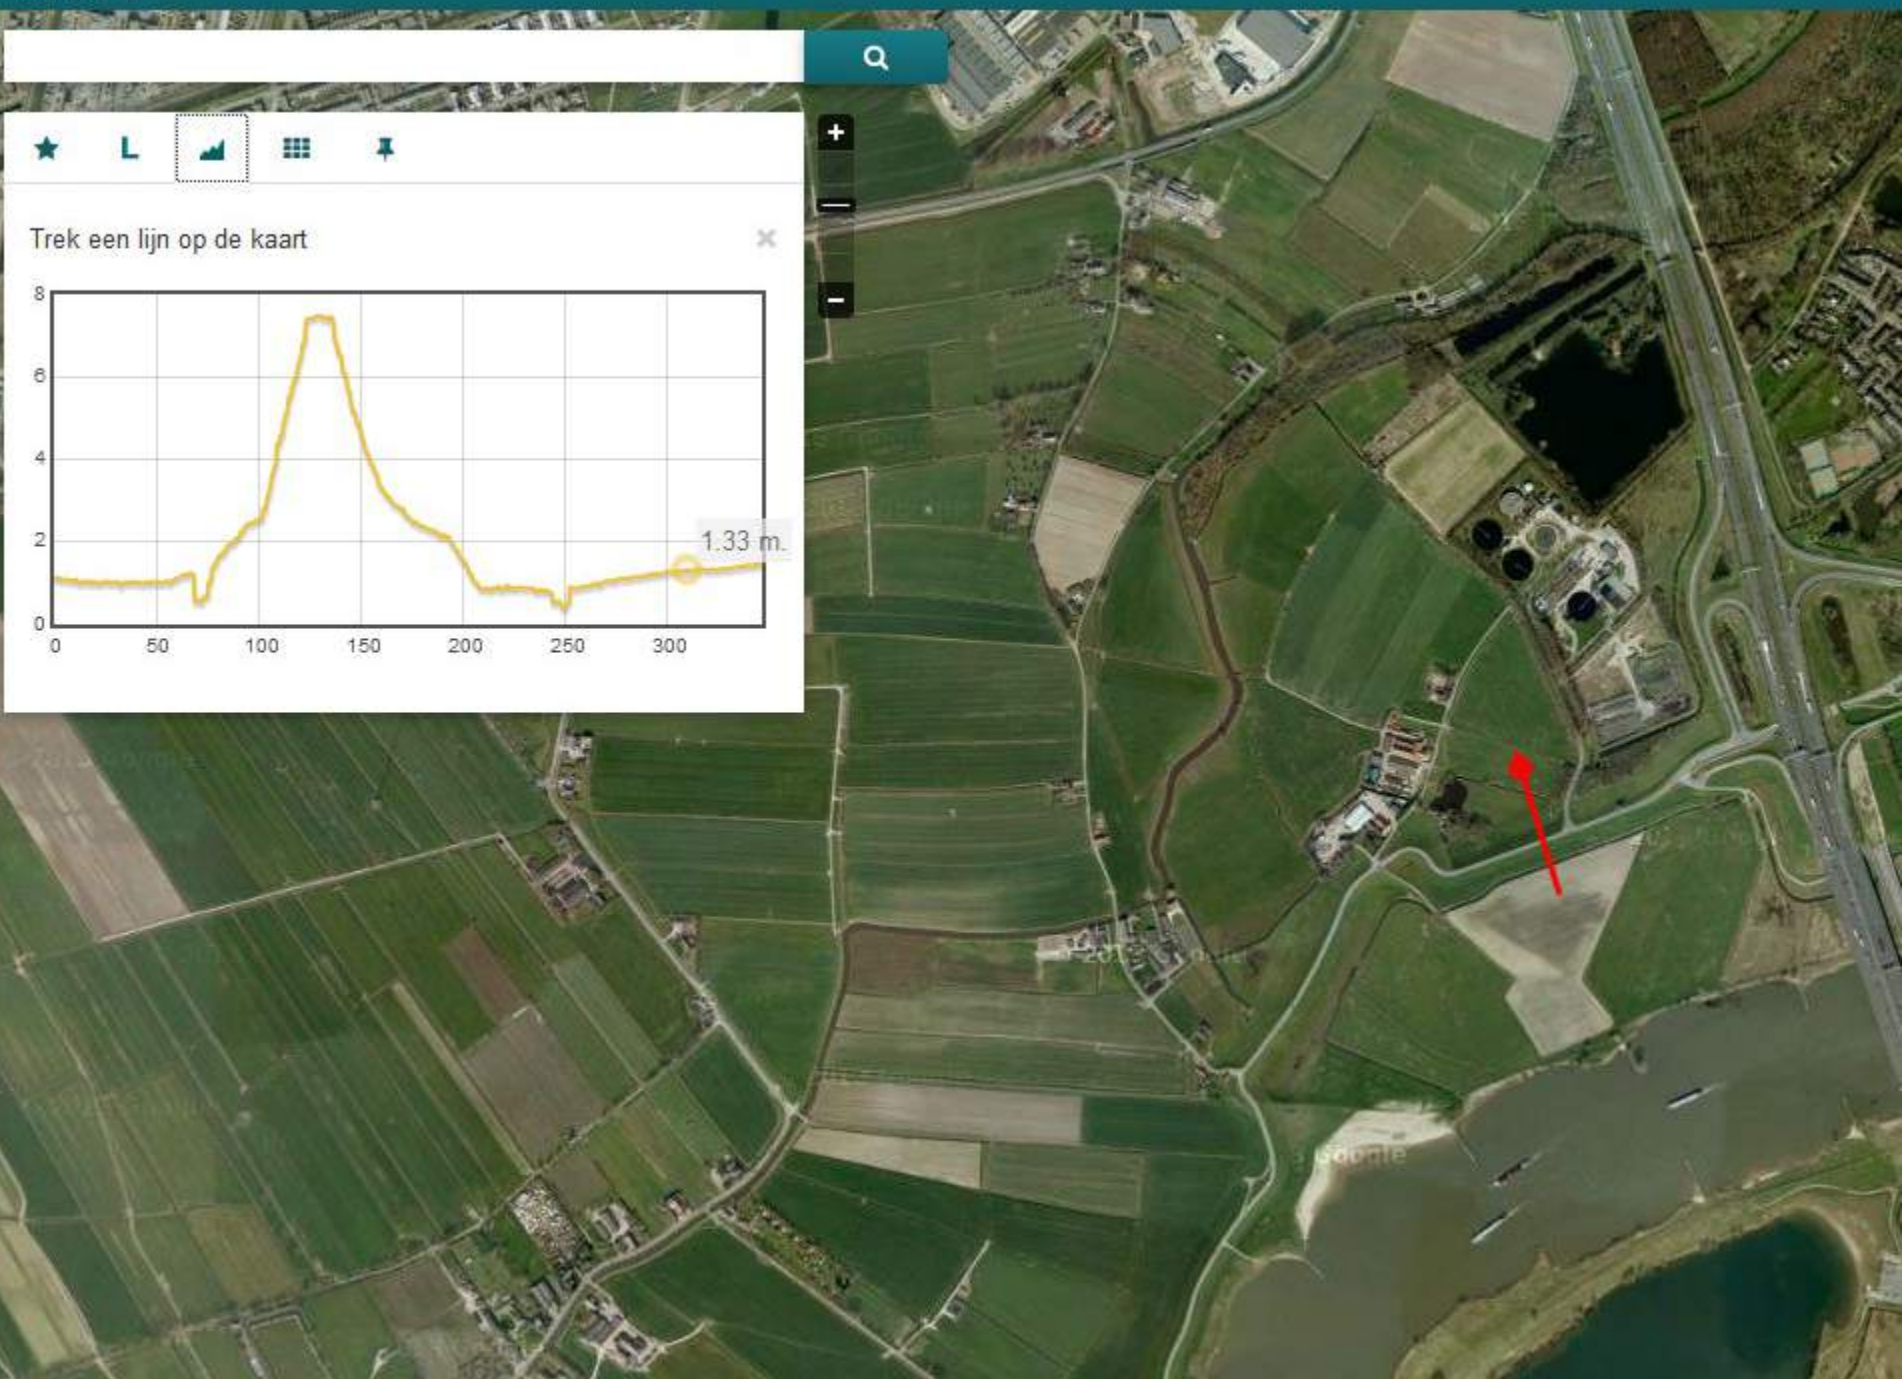

Raster store – cloud computing

- › Storage of raster data
- › Fast calculations
- › Quick extract of parts of the Netherlands for modelling

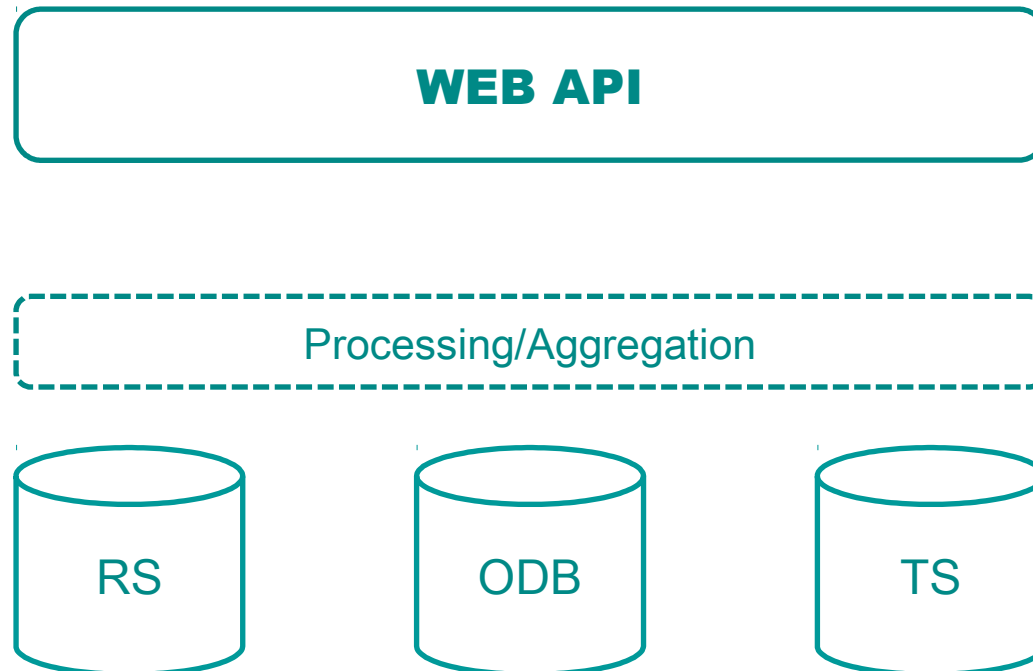

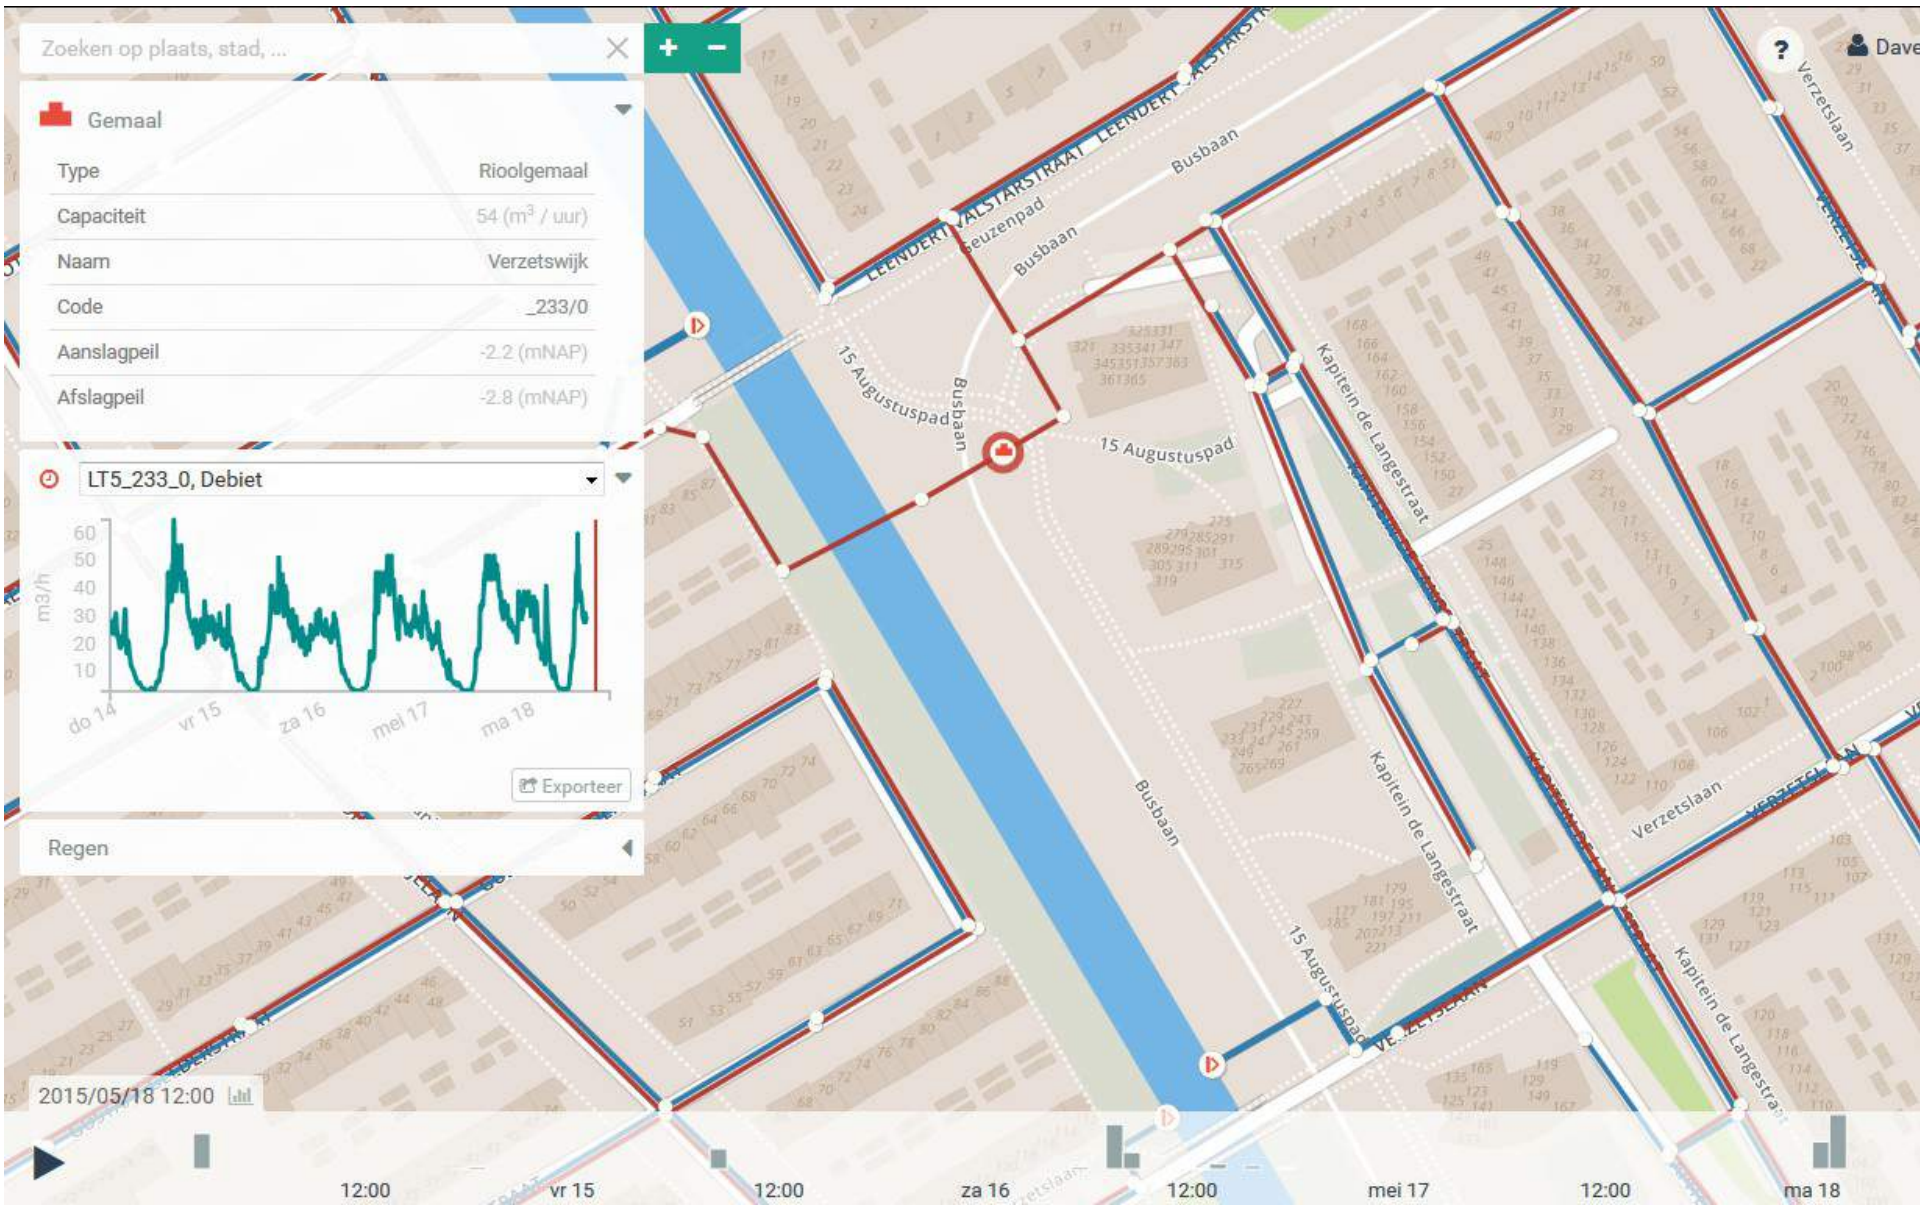

Visualizing data in Lizard

- › BigData storage of (open) data of end users and partners
- › Dissemination via well-documented API (Back End).
- › Continuous development: > 4 fte

Visualizing data

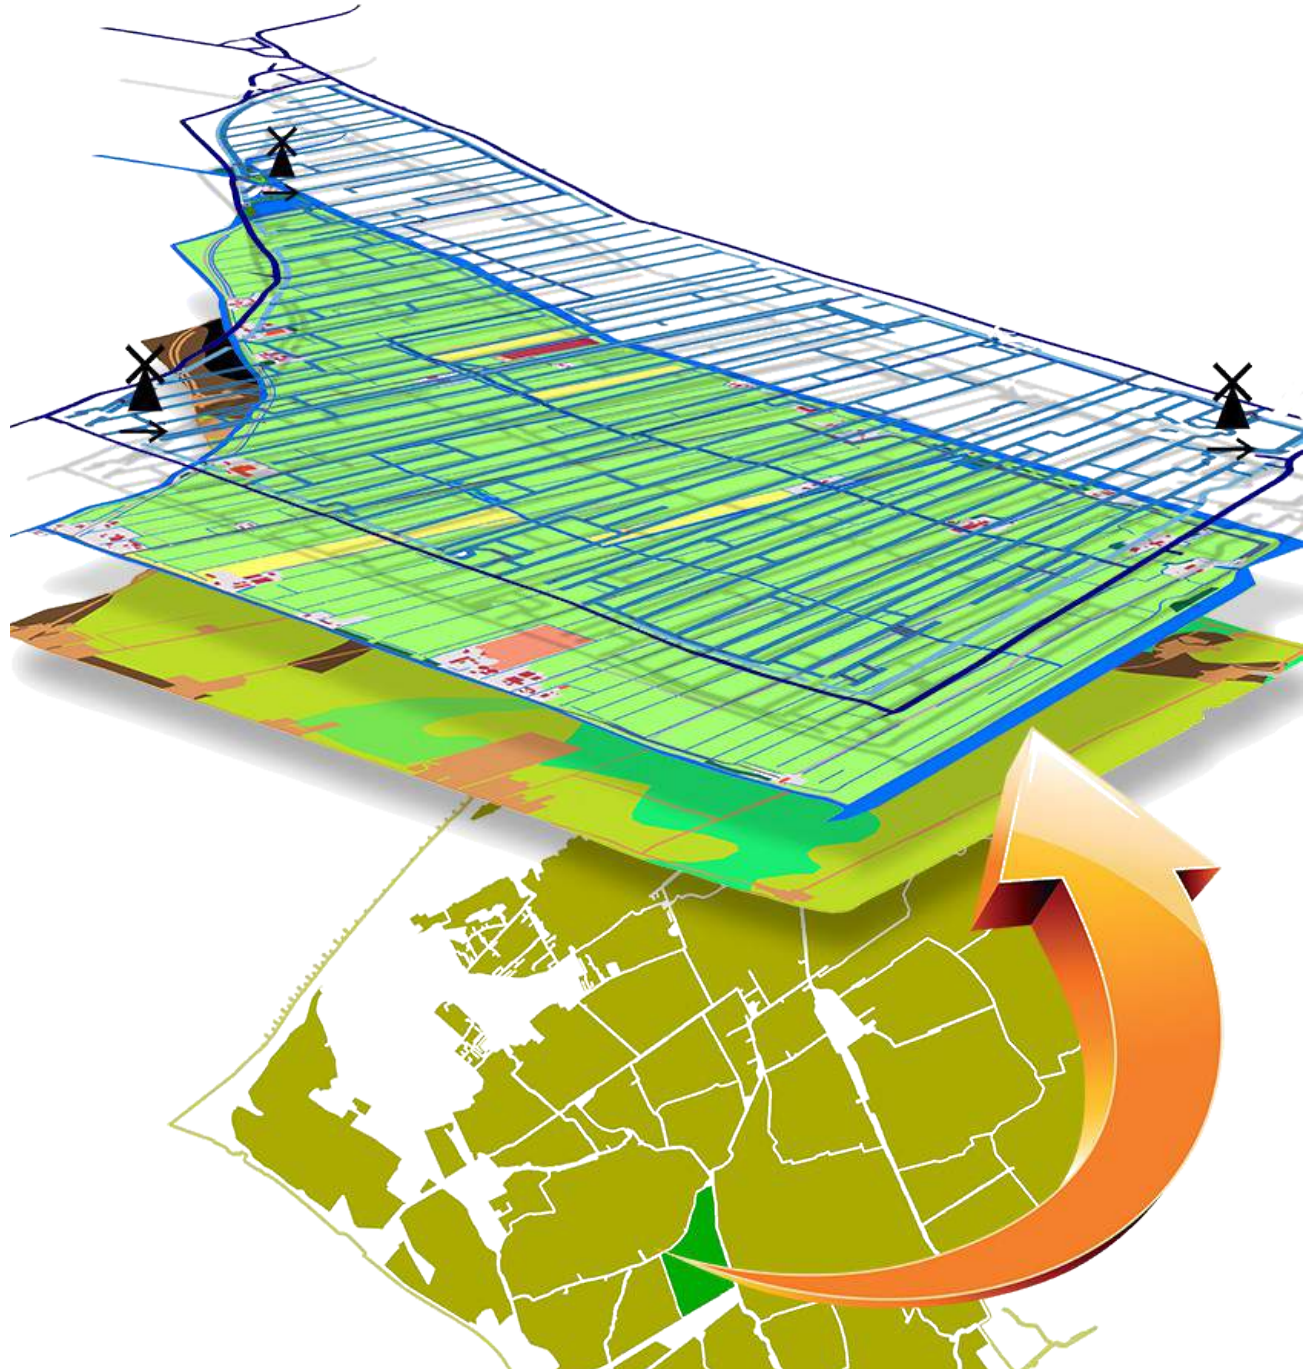

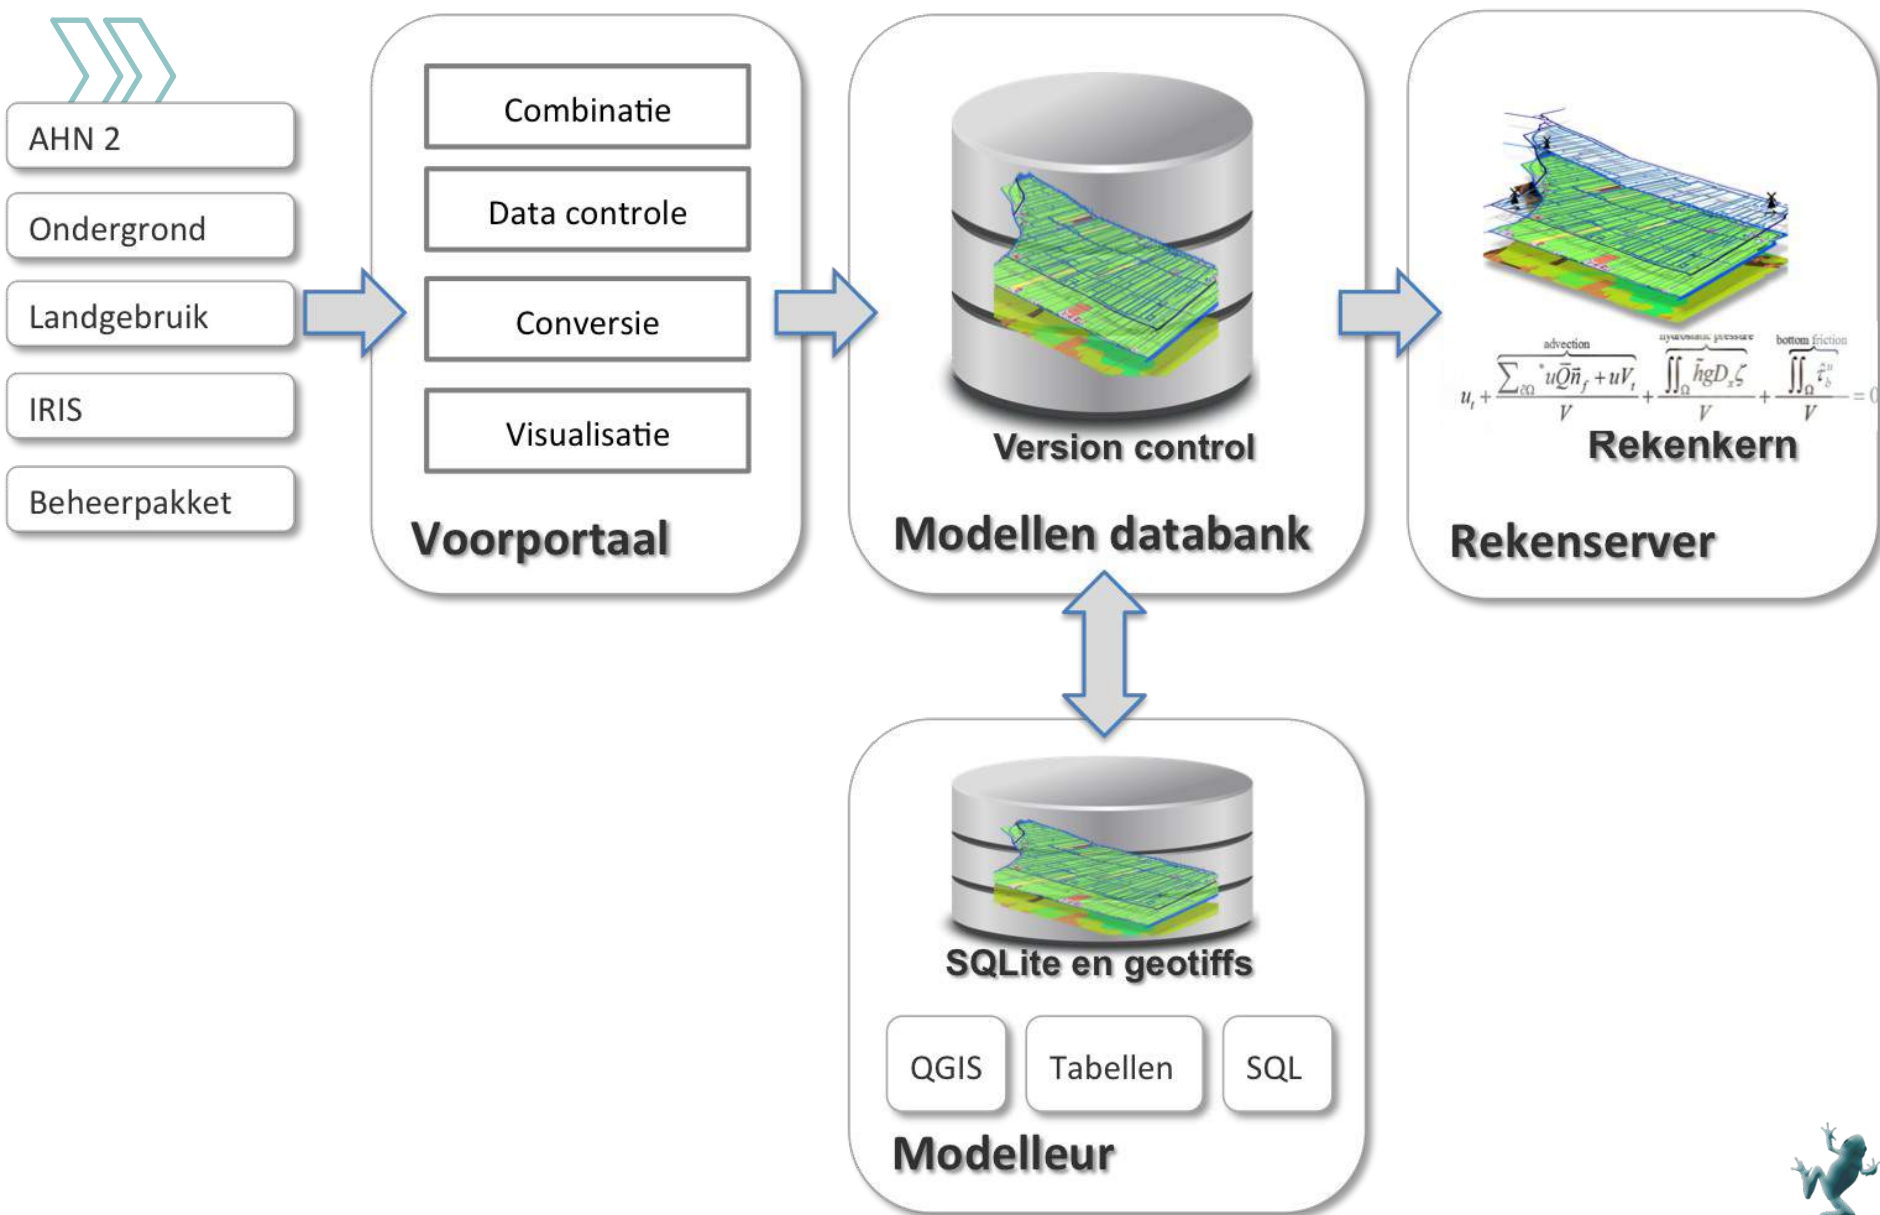

Visualizing data

- › Postgis
- › Raster store
- › Tilestache
- › Utfgrid
- › Leaflet
- › Hadoop

Building a hydrological model

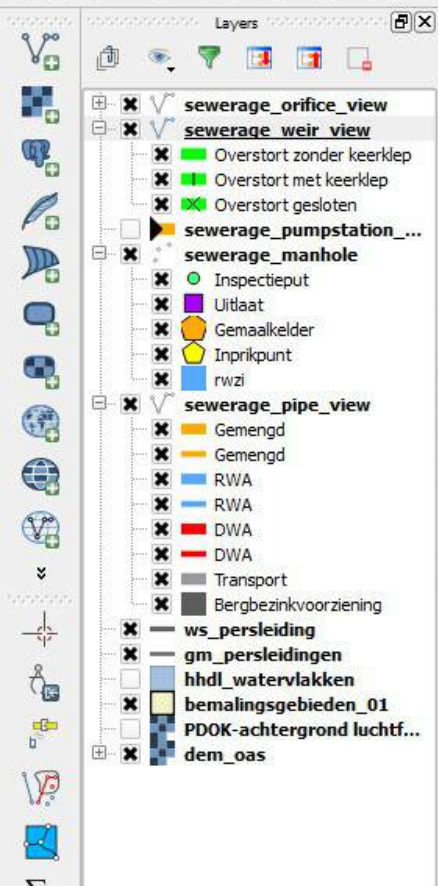

- › QGIS
- › GDAL
- › Tortoise HG

QGIS 2.6.0-Brighton - schiedam

Visualizing results

Worldwide application

Example projects:

- › Netherlands: Amsterdam, Rotterdam, The Hague, Almere, North Holland, South-Holland
- › Africa: Kenia, South-Africa, Mozambique
- › Azia: Vietnam, Bangladesh, Singapore
- › America: St Lucia

Summary

- › Open source software used to build a 3di model
 - Building models : Qgis, gdal, tortoise hg
 - Running models: Leaflet, angular
 - Visualising data and results: postgis, hadoop, raster store
