Collaborative Data Collection with QGIS & Mergin Maps

What's New

FOSS4G Belgium 2026, Tomas Mizera

QGIS is a powerful platform for geospatial work, but field data collection has always needed extra tooling. Mergin Maps closes that gap, giving teams a simple way to collect, sync and manage field data alongside QGIS. This talk covers what's changed over the past year, including the new webmaps capability which lets users preview, share and export collected data directly from a browser.

Mergin Maps

- Traditionally known as field data collection tool for QGIS
- Collaborative data collection
- Works offline
- Automatic data reconciliation
- Natively in QGIS

- Now with webmaps for easy data access

The new stuff

Webmaps

- “The data collection is great, but sharing the data with externals is complicated”
- QGIS is amazing
  - Using it for simple actions feels too complicated
- No setup, no hosting, no maintenance
- Data instantly available online
- Share your maps via URL, just like you share Google doc or Youtube video

- Available to everyone in Early access program

Webmaps features

- Background maps
- Map sharing
- Map embedding
- Layer tree
- Map themes
- Auto refresh
- Map apps

Webmaps demo

Webmaps apps

- “If it only did this”, “if it only did that”, ..
  - Each map is different
  - Each industry is different
  - Each organization is different
- Leverage AI to build custom map applications on top of your collected data
- Apps have access to data, API and map canvas
- Measurement tools, custom PDF reports, data search

Webmaps apps demo

OGC API data access

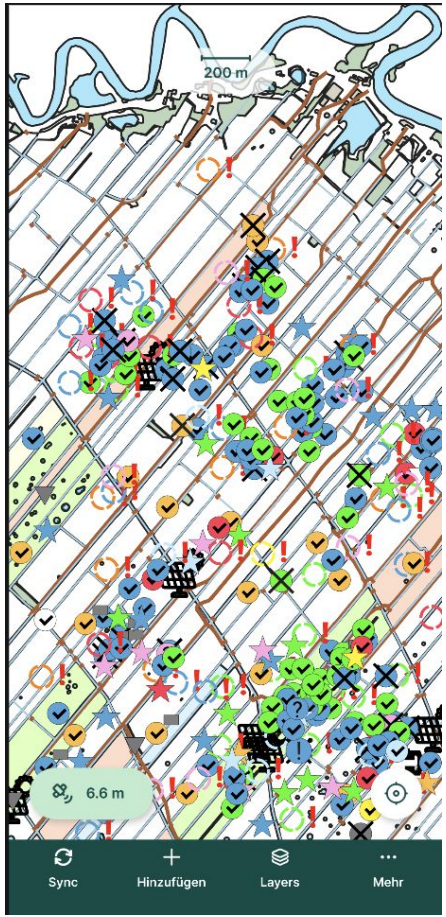

- Connect your collected data with external systems
- Dashboards, custom GIS systems, QGIS
- No hosting, no server setup

Filtering

Filtering setup

Filtering in the app

- Maps can easily get overwhelming

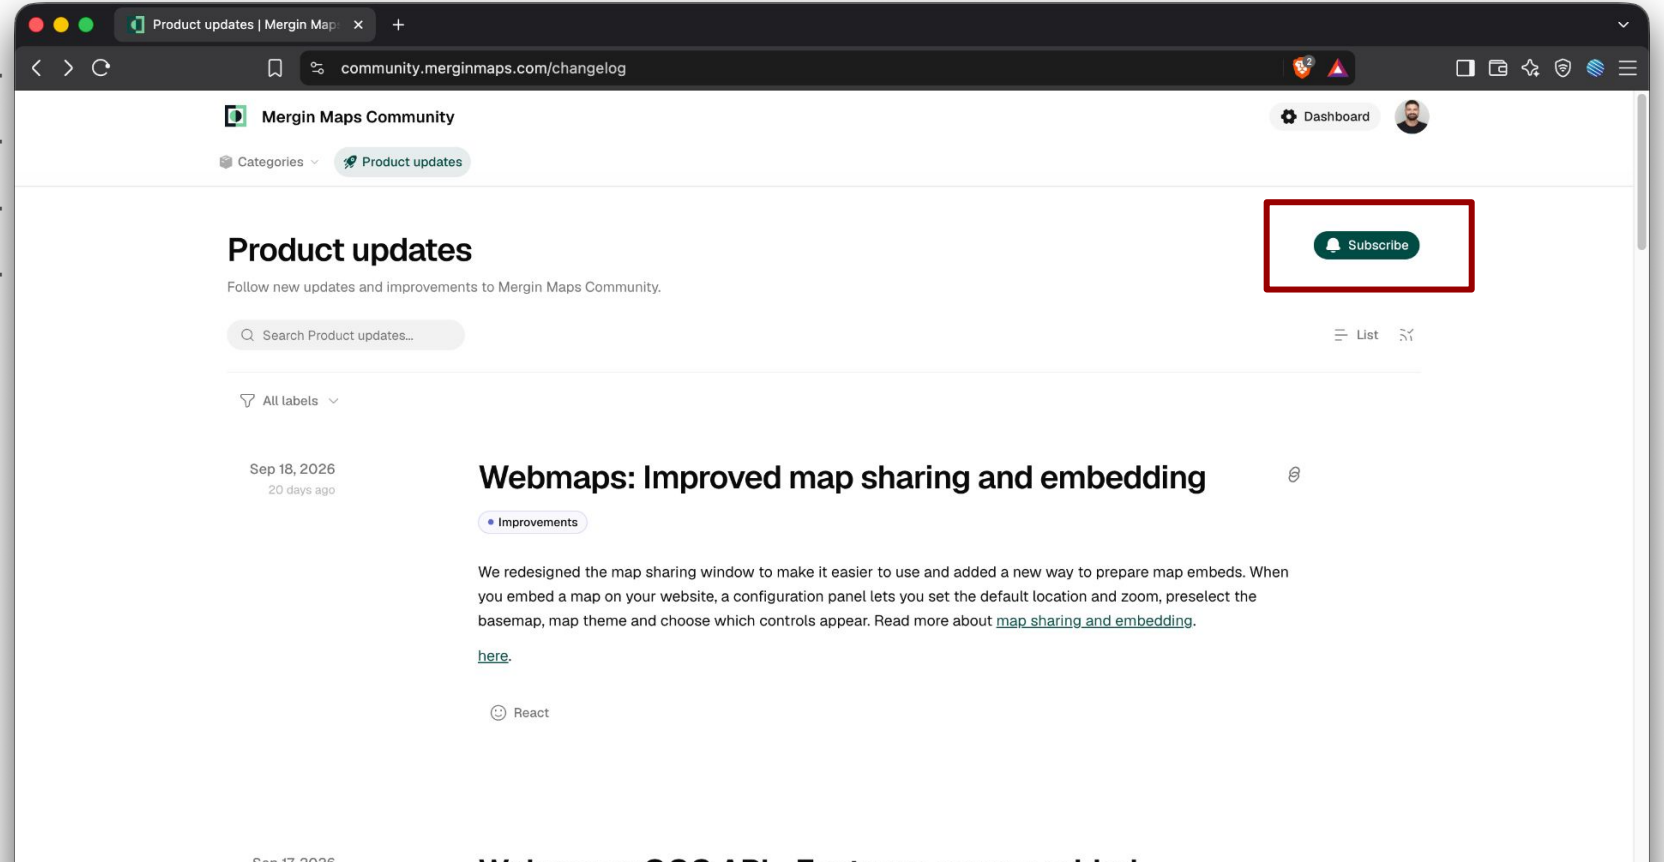

External GPS (GNSS) receivers - support for new standards

Audit logs

And much more

- Multi-feature data editing and deletion
- Layers requiring auth available in the mobile app
- Orthometric heights
- Last sign in time for workspace members

And much more

Don’t just take our word for it..

Centre de recherches routières
Inspire. Involve. Impact.

JACOPS.
INFRA. TELECOM. RAIL.

- Mergin Maps - QGIS data collection tool
- Growing webmaps support, reserve your early access access
- Filtering
- OGC API
- GNSS receivers
- Audit logs and more

We hope to mention your example next year

Interested? Come talk to us at our booth

Workshop is fully booked, but we will gladly show you demo at our booth
